

How to build and run?

1. Set the Following environment variables:

- JSDK_PATH to point to java installation. For example, it may point to "C:\Program Files\Java\jdk1.5.0_05"
- VSINSTALLDIR to point to Visual Studio installation. For example, it may point to "D:\Program Files\Microsoft Visual Studio 8". To avoid setting this variable, the build.bat script in step 2 may be executed from a Visual Studio command prompt, which already has this variable set to point to the Visual Studio installation.
- OIV_PATH to point to open inventor path. For example, it may point to "C:\xip".

2. From a command prompt, navigate to the directory containing build.bat and execute build.bat.

3. From the same command prompt, execute run.bat.
